

Terra Concordia — Release Notes

What's new and fixed in the current version

Version 1.1.0 — 2026-06-18

New

- UNIQUE ABILITIES per civilization (passive, active in every mode): Solaris (red) — constructions and wonders cost 2 resources less; Mariteia (blue) — explores ocean and island without spending a worker and reveals +1 hex per Explore; Verdantis (green) — Restore yields double (+1 extra global sustainability and +1 extra VP); Aurifera (yellow) — +1 gold on every market trade and 1 extra Trade action per round (4 instead of 3). Detailed in the Tutorial (Civilizations tab) and the Civilopedia.
- Defeat/collapse video shown to every losing player; victory video only for the winner (any mode). Videos play before the end-of-game screen.
- 3 new procedural music tracks — Serene, Epic and Mystic — selectable in Settings !' Sounds (default for new players: Mystic).
- Help menu: "Release Notes & Latest Updates" (this PDF).
- Main menu: "Manuals & Website" (opens the site in the current language) and "Discord Invite" buttons.
- Version and build date shown on screens outside the game.
- Animation pack: floating numbers, worker "pop", animated hex reveal, pulsing ring on the active player + glow on the selected action, shake/spark on the Sustainability bar.
- Redesigned main menu: no frame, reordered buttons with emojis, "Quit" in the bottom-right corner; the Civilopedia button now opens the in-game guide.
- Unexplored hexes twinkle with 4-point golden stars and a soft halo (replacing the old dots).
- Full keyboard play: Tab moves between panels and buttons, Enter/Space activates. New tutorial tabs: "Shortcuts", "VP Breakdown" (how points are counted) and "Strategy" (how to score more).
- Larger AI difficulty selector and a more prominent "play against AI" toggle; the Research modal zooms the card on hover.

Achievements

- Win-only achievements unlock only on an ACTUAL win — never when losing in solo (scenario goal respected), losing to another player, or losing by ecological collapse.
- Civilization achievements unlock when winning with that civilization in any mode.
- "Perfect Balance": win with Global and Individual Sustainability at 10. "Diplomat" and "Path of Peace" now track the Influence ACTION.
- "Hard Mode Win" requires AI in the match; "Diplomacy 4 players" uses the initial human count.
- Winning because an opponent left or dropped (forfeit) NO LONGER unlocks achievements that require winning the match.

Fixes

- Solo / vs-AI: cards that depend on other players / human cooperation are removed from the decks.
- Videos no longer play at the same time as music/SFX — game audio is muted while a video plays.
- Multiplayer: turn timer respects the disconnect pause; residual state (discard/timeline) reset each new game; winner computed via the full ranking (host and guest aligned); anti-cheat on discards; error feedback when accepting an alliance; ecological collapse ignores players who left.
- Multiplayer chat removed (store content policy).
- Many translations (PT/EN/ES): HUD, alerts, history log (maintenance/planning/production), turn labels, discard, navigation, diplomacy and end of game.
- Unexplored hexes show fog (instead of "?"); correct icon on the "Public Objective Led" notice.
- Slightly taller Global Sustainability bar; wider Settings window; footer with correct version; manuals link (PT) fixed.
- Each mode runs its correct number of rounds; intro and victory videos updated.
- Scoring: an achieved secret objective now correctly adds its VP (it was worth 0 before). Conditional

card VP (per alliance / per player with less influence) is computed correctly, without double-counting.

- Player-interaction cards implemented/fixed: Embargo, Boycott, Partnership, Monopoly, Trade Routes and Military Alliance (immunity to negative events).
- The AI now explores hexes in random directions (no longer always toward the same side).
- Action buttons no longer stay "stuck" in focus when switching actions; subtle background even when inactive. The "show owner inside hex" option now starts off.
- Saves are now written to "Terra Concordia\saves" (compatible with Steam Cloud); saves from older versions are migrated automatically.
- Multiplayer: the host reliably ends the match when another player leaves or drops — a "heartbeat" detects abrupt disconnects. Remaining players see a notice of who left before the scoreboard and on the final screen.
